Research Papers

Late to post-Variscan deformation phases and palaeostresses in the KTB pilot research well (Bohemian Massif, Germany)
G. Zulauf (Frankfurt, Germany) 1

Anomalies in geophysical and geochemical parameters revealed on the occasion of the Paravani ($M = 5.6$) and Spitak ($M = 6.9$) earthquakes (Caucases)
G. Areshidze (Tbilisi, Georgia), F. Bella, P.F. Biagi and M. Caputo (Rome, Italy), V. Chkuaseli (Tbilisi, Georgia), G.D. Monica and A. Ermini (Rome, Italy), P. Mandjgaladze (and G. Melikadze (Tbilisi, Georgia), V. Sgrigna (Rome, Italy), L. Slavina (Moscow, Russia) and D. Zilipmiani (Tbilisi, Georgia) 23

Palaeomagnetically inferred tectonic rotations of the Abruzzi and northwestern Umbria
P. Márton (Budapest, Hungary) and M. D'Andrea (Rome, Italy) 43

Implication of $^{40}Ar/^{39}Ar$ dating of Early Tertiary volcanic rocks from the north-Chilean Precordillera
K. Hammerschmidt, R. Döbel and H. Friedrichsen (Berlin, Germany) 55

Determination of principal stress magnitudes using calcite twins and rock mechanics data
O. Lacombe (Paris, France) and P. Laurent (Montpellier, France) 83

Book Review

The Role of Fluids in Crustal Processes, by J.D. Bredehoeft and D.L. Norton (Editors)—R.B. Knapp 95

Erratum 96

Special section: Geodesy – Seismology: Deformations and Prognosis (edited by Yu.D. Boulanger and P. Vyskočil)

Preface iii

GEODESY: DEFORMATIONS AND PROGNOSIS

Theory and techniques

The prediction of strong earthquakes
A.K. Pevnev (Moscow, Russia) 97

Monitoring co- and pre-seismic motion by geodetic techniques
E. Groten (Darmstadt, Germany) 101

The role of the elastic rebound theory in design and evaluation of deformation survey
L. Bányai (Sopron, Hungary) 107

Geodynamical monitoring of local areas. An uniform treatment of geodata based on directional and geometrical analysis
G. Papp (Sopron, Hungary) 111

Regional and local studies

Recent fault tectonics and their relation to the seismicity of East Germany
J. Ellenberg (Jena, Germany) 117

Geodynamic profile of Śnieżka - Borowiec as an element of complex investigations of recent crustal movements
S. Cacoń (Wrocław, Poland) 123

Recent vertical surface movements in the Carpathian Basin
I. Joó (Székesfehérvár, Hungary) 129

Geodetic data on the Earth's crustal kinematic processes within the Sofia seismo-forecasting test area
I.N. Totomanov, N.I. Georgiev and P.S. Raev (Sofia, Bulgaria) 135

Study of recent crustal movements in Romania (Gruiu-Caldarusani polygon)
F. Rădulescu, D. Ghiţău, V. Nacu and D. Stiopol (Bucharesk, Romania) 141

Measurement of short-base deformations in one of the regions of active fracturing in the Hanoi depression (the Socialist Republic of Viet Nam).
R.M. Karmaleeva (Moscow, Russia), Nguyen Trong Yem, Nguyen Dinh Tu, Le Minh Quoc and Chan Quoc Hung (Hanoi, SRV) 145

Deformations of the Earth's surface in the Klyuchi geodynamic polygon, Kamchatka, 1978–1987
S.A. Fedotov and N.A. Zharinov (Petropavlovsk-Kamchatsky, Russia), G.A. Sharoglazova (Moscow, Russia) and Yu. V. Demianchuk (Petropavlovsk-Kamchatsky, Russia) 151
Vertical ground movements on the coast of the Kamchatka Gulf, their specific features in the epicentral zone of the August 17, 1983 earthquake $M = 6.9$, before and after
S.A. Fedotov, M.A. Maguskin, A.P. Kirienko and N.A. Zharinov (Petropavlovsk-Kamchatsky, Russia) 157
Present-day geodynamics and seismicity in the Garm test area, Tadjikistan
V.A. Belokopytov, T.V. Guseva, A.A. Lukk, Yu.P. Skovorodkin, Yu.A. Trapeznikov and V.I. Shevchenko (Moscow, Russia) 165
Invariant characteristics of the straining process in a geophysical medium obtained by electrooptical distance meter observations
V.F. Garagash, K.B. Aldamzharov and V.S. Peredero (Alma Ata, Kazakhstan) 169
Geodimeter measurements from the Mishennaya Observatory: analysis of observation results
V.F. Bakhtiarov, V.E. Levin and A.V. Saprykin (Petropavlovsk-Kamchatsky, Russia) 173

SEISMOLOGY: DEFORMATION AND PROGNOSIS

Theory and technique
Fractal properties of fault systems by scattering of body seismic waves
S.A. Shapiro and I.S. Faizullin (Moscow, Russia) 177
A new geodynamical model for the seismicity and in situ stresses of the Mediterranean region
A. Rousseau (Talence, France) 183
Possible prediction-modulation effect in the short-period sea-wave microseisms
E.I. Levy (Sofia, Bulgaria) 203
Laser strainmeters: New developments and earthquake prediction applications
M.N. Dubrov and V.A. Alyoshin (Moscow, Russia) 209

Regional and local investigations
"Concerts" of earthquakes and tranverse dislocations in the Caucasus
S.A. Pirouzian (Yerevan, Armenia) 215
Strain processes before the Spitak earthquake
I.L. Nersesov and L.A. Latynina (Moscow, Russia) 221
Aftershocks focal mechanisms of the Spitak earthquake
V.G. Agaronian and E.G. Geodakian (Yerevan, Armenia), M.A. Danilova and S.L. Yunga (Moscow, Russia) 227
Electrical resistivity variations and moderate earthquakes
V.D. Bragin, A.M. Volykhin and Yu.A. Trapeznikov (Moscow, Russia) 233
Local stress and strain fields near a fault as indicative of movement on its surface. Mechanics and seismology
D.N. Osokina and K.I. Kuznetsova (Moscow, Russia), and N.Kh. Bagmanova (Frunze, Kirgiziya) 239
Different scale deformation in the transition zone of the Tadjik depression, southern Tien-Shan
O.V. Soboleva, V.I. Starkov and E.Ya. Starkova (Dushanbe, Tadzhikistan) 247
Deformations of the near-surface part of the Earth's crust by seismologic and geodetic data obtained on Baikal geodynamic polygons
S.I. Kesselman, P.E. Kotliar, O.A. Kuchay and S.A. Tychkov (Novosibirsk, Russia), and L.I. Serebiakova (Moscow, Russia) 251
Very shallow earthquakes and brittle deformation in active volcanic areas: the Etnean region as an example
E. Lo Giudice (Catania, Italy) and R. Rasà (Messina, Italy) 257
Anomalous crustal movements prior to great earthquakes as derived from tide-gauge records: the Messina, 1908, $I = XI$, earthquake case history
A. Bottari (Messina, Italy), P. Carveni and E. Lo Giudice (Catania, Italy), A. Nikonov (Moscow, Russia), and R. Rasà (Messina, Italy) 269
Improvements of the supervision of mining areas and seismoactive regions by measurements of antiparallel tilts
D. Simon (Potsdam, Germany) 277
Application of the extracted deposits volume as à measure of deformation for the seismic hazard evaluation in mines
E. Glowacka (Warsaw, Poland) 285

Regular section

Research Papers
The flexural isostatic response of the lithosphere to extensional tectonics
S.S. Egan (Keele, UK) 291
Anisotropy of complex magnetic susceptibility as an indicator of strain and petrofabric in rocks bearing sulphides
G.J. Borradaile and M. Puumala (Thunder Bay, Ont., Canada), and M. Stupavsky (Kingsville, Ont., Canada) 309
Episodic accretion and strain partitioning in a model sand wedge
G. Mulugeta and H. Koyi (Uppsala, Sweden) 319

Mud diapirism, fan sedimentation and strike-slip faulting, Caribbean Colombian Margin
G. Vernette (Talence, France), A. Mauffret (Paris, France), C. Bobier (Talence, France), L. Briceno (Bogota, Colombia), and J. Gayet (Talence, France) 335
Diagnosis of time of increased probability of strong earthquakes in the Jordan-Dead Sea rift zone
E. Arieh (Holon, Israel), I. Rotwain (Moscow, Russia), J. Steinberg (Holon, Israel), I. Vorobieva (Moscow, Russia) and F. Abramovici (Tel Aviv, Israel) 351
Mode of mixture of oceanic fragments and terrigenous trench fill in an accretionary complex: example from southern Sakhalin
G. Kimura (Takamatsu, Japan), V.S. Rodsdestvenskiy (Yuzhno-Sakhalinsk, Russia), K. Okumura (Ibaraki, Japan), O. Melinikov (Yuzhno-Sakhalinsk, Russia), and M. Okamura (Kochi, Japan) 361
Nature of continental crust along the Narmada-Son Lineament inferred from gravity and deep seismic sounding data
R.K. Verma and P. Banerjee (Dhanbad, India) 375
